

Feedback Shield Research Participation Part 01

This survey aims to capture your consent to opt into the research study as well as your confidence and understanding of Physical Computing before embarking on the study.

As part of the study you will test a new Physical Computing prototype called a Feedback Shield.

What is a Feedback Shield:

The shield sits on top of an Arduino board and provides visual feedback of your pin behaviour. This is very useful when troubleshooting your code and circuitry. It enables you to see what behaviour the pin is enacting and how fast in order to understand if this matches the intended programmed behaviour. It can also help you identify if you have wired a component incorrectly.

Participation:

As part of stage one of the study, you will be introduced to the shield, how to use it and test it out via teaching examples during your Physical Computing unit. You will then be able to opt-in to a part 2 of the study that allows you to continue to use the shield in your personal projects.

Participation in this study is **not related to your Physical Computing Unit assessment**. It does not impact your grade and no advantage or disadvantage is obtained. You will not be assessed on your use of this tool in any way and should your participation impact your ability to undertake your Diploma work you can withdraw at any stage.

- In opting-in to this study you are consenting to
- providing anonymous feedback on the use of the shield after each small activity
- for your feedback to be used as the basis for academic analysis

*If you consent to participate in the study, you will be **free to withdraw your participation at any point**. You will not be obliged to give any reason for deciding not to take part.*

A second stage of consent will taken before opting-in to part 02. You do not need to participate in both stages of this research should you decide not to.

What will happen to the results of the research project and data collected?

Analysis from the survey - including quotations from you - will contribute to an academic evaluative commentary. Your answers may also be used in academic reports, papers or conference presentations. These may appear online. However, as mentioned above your answers will remain anonymous. When inputting feedback via the online webpages, you may see your name listed in a dropdown menu. This is so you can allocate your feedback to the same ID each time. It is important to note these names are **encrypted** before being stored alongside your data to maintain anonymity.

Only researchers and supervisors named below will have access to the Research Data collected during this project.

External contact

Should you have any feedback or concerns during the process you may contact an external member of staff not involved in the research. They are impartial and will keep your information confidential.

Please contact :

Irti Nasar: shaikhirtiza.nasar@arts.ac.uk

or

Joana Chicau : j.chicau@arts.ac.uk

(who is not a member of staff on your course)

Contact I can be contacted further regarding any questions via email.

Jen Sykes, Researcher j.sykes@arts.ac.uk

Supervisors

Mick Grierson Rebecca Fiebrink

1. Do you consent to participate in part 01 of the Feedback Shield study

☐ Yes

☐ No

2. Have you worked with Physical Computing before?

☐ Yes

☐ No

3. How confident are you in using Arduino ?

Very unconfident unconfident Fair confident very confident

How confident
are you in using
Arduino ?

☐☐☐☐☐

4. How confident are you in using electronic circuits ?

Very Unconfident Unconfident Fair confident very Confident

How confident
are you in using
Arduino ?

☐☐☐☐☐

5. How confident are you in troubleshooting code ?

Very Unconfident Unconfident Fair confident very Confident

How confident
are you in using
Arduino ?

☐☐☐☐☐

6. How confident are you in troubleshooting circuits ?

Very Unconfident Unconfident Fair confident very Confident

How confident
are you in using
Arduino ?

☐☐☐☐☐
