

Feedback Shield Research Participation Part 02

This survey aims to capture your consent to opt into the second part of the research study as well as your confidence and understanding of Physical Computing after embarking on part one of the study.

As part of the study you will test a new Physical Computing prototype called a Feedback Shield in your project work.

What is a Feedback Shield:

The shield sits on top of an Arduino board and provides visual feedback of your pin behaviour. This is very useful when troubleshooting your code and circuitry. It enables you to see what behaviour the pin is enacting and how fast in order to understand if this matches the intended programmed behaviour. It can also help you identify if you have wired a component incorrectly.

Participation:

As part of stage two of the study, you will be able to continue to use the shield in your personal projects and general in-class activities. The use of the shield will be less structured than part one now that you understand how it functions. You can opt to leave the shield on your Arduino Leonardo and continue to use it to aid troubleshooting. At the end of the unit you will be asked to undertake an exit survey and provide comments on the use of the shield.

Participation in this study is not related to your Physical Computing Unit assessment. It does not impact your grade and no advantage or disadvantage is obtained. You will not be assessed on your use of this tool in any way and should your participation impact your ability to undertake your Diploma work you can withdraw at any stage.

In opting-in to this study you are consenting to

- providing anonymous feedback on the use of the shield after the unit finishes
- for your feedback to be used as the basis for academic analysis

If you consent to participate in the study, you will be free to withdraw your participation at any point. You will not be obliged to give any reason for deciding not to take part. You can begin to use the shield and then stop before the unit is finished should you wish.

What will happen to the results of the research project and data collected?

Analysis from the survey - including quotations from you – will contribute to an academic evaluative commentary. Your answers may also be used in academic reports, papers or conference presentations. These may appear online. However, as mentioned above your answers will remain anonymous. When inputting feedback via the online webpages, you may see your name listed in a dropdown menu. This is so you can allocate your feedback to the same ID each time. It is important to note these names are encrypted before being stored alongside your data to maintain anonymity.

Only researchers and supervisors named below will have access to the Research Data collected during this project.

External contact

Should you have any feedback or concerns during the process you may contact an external member of staff not involved in the research. They are impartial and will keep your information confidential.

Please contact :

Irti Nasar: shaikhirtiza.nasar@arts.ac.uk

or

Joana Chicau : j.chicau@arts.ac.uk

(who is not a member of staff on your course)

Contact I can be contacted further regarding any questions via email.

Jen Sykes, Researcher j.sykes@arts.ac.uk

Supervisors

Mick Grierson Rebecca Fiebrink

1. How easy did you find using the shield?

Very hard

Hard

Fair

Easy

Very easy

How easy did
you find using
the shield?

2. What challenges did you face when using the shield?

3. What did you find worked well when using the shield?

4. What would you improve or change about the shield?

5. Do you consent to participating in part 2 of the study?

☐ Yes

☐ No

6. How confident are you in using Arduino ?

	very unconfident	unconfident	fair	confident	very confident
How confident are you in using Arduino ?	☐	☐	☐	☐	☐

7. How confident are you in using electronic circuits ?

	very unconfident	unconfident	fair	confident	very confident
How confident are you in using Arduino ?	☐	☐	☐	☐	☐

8. How confident are you in using troubleshooting code ?

	very unconfident	unconfident	fair	confident	very confident
How confident are you in using Arduino ?	☐	☐	☐	☐	☐

9. How confident are you in using troubleshooting circuits ?

	very unconfident	unconfident	fair	confident	very confident
How confident are you in using Arduino ?	☐	☐	☐	☐	☐

10. Do you consent to visual documentation of your Physical Computing Unit work to be used anonymously as part of this research?

- ☐ Yes
- ☐ No
- ☐ Other
