

Functional Errors Workshop

This workshop is part of my PhD research as a student at the Creative Coding Institute, UAL.

I am conducting an enquiry into the teaching methods used when teaching Creative Coding and Physical Computing in an Art School environment. I am interested in documenting the student experience of learning to work with creative computing as an artistic material.

This survey aims to capture your confidence and understanding before and after the workshop. Alongside this it asks for feedback regarding the toolkits used during the workshop.

Participation:

By taking part in the digital surveys asking your opinions you are consenting to the data being used as the basis for academic analysis.

If you choose to participate in the survey, you will be free to withdraw your participation at any point. You will not be obliged to give any reason for deciding not to take part.

Will my participation be kept confidential?

Your anonymity is very important. The data used will be kept anonymous throughout. The information about you will be confidential to me, as the researcher. You will not be identified individually anywhere in the research. If I quote anything you have said in an interview, it will be anonymous. An example might be: 'Participant A said, 'The project is...''

What will happen to the results of the research project and data collected?

Analysis from the survey - including quotations from you - will contribute to an academic evaluative commentary. Your answers may also be used in academic reports, papers or conference presentations. These may appear online. However, as mentioned above your answers will remain anonymous.

Only researchers and supervisors named below will have access to the Research Data collected during this project.
